

CONRES INTEGRATION & LOGISTICS CENTER

Simplify Your Supply Chain and Reduce Costs

When your organization acquires new technology, your IT professionals are tasked with the logistics of building and launching your new environment. Every moment your staff is focused on procurement, deployment and configuration rather than core initiatives, it costs your organization time and money. Wouldn't it be nice to offload those responsibilities to a trusted advisor that has a fully staffed facility?

With ConRes, you can.

Our Integration and Logistics Center was created to support you through the entire process from design and procurement to implementation, deployment and vendor management. The facility enables our hands-on approach to executing tailored infrastructure rollouts. All of this helps you:

- 1 Minimize overhead and logistics costs**
- 2 Streamline configuration and testing**
- 3 Reduce risk and complexity for deployments**
- 4 Accelerate technology initiatives**
- 5 Save time and money**

We understand that it takes a handful of manufacturers to create a solution. As the bridge between you and the manufacturer, rely on us to manage complex supply chains.

Support and Service That Runs Full Circle

Our **ISO/IEC 27001-certified Integration & Logistics Center** offers:

INVENTORY & ASSET MANAGEMENT

- Equipment warehousing and staging in a secure, climate-controlled facility
- Disposal and recycling of waste
- Asset decommissioning and recovery
- Moving of appliances from customer facilities

ENGINEERING

- Collectively our staff holds over 500 unique technology certifications
- Dedicated subject-matter experts for customized service
- Dedicated engineers to manage hardware/software setup, configuration and testing
- Customized runbooks

TRACKING

- Asset tagging, labeling, tracking and barcoding
- Issue birth and death certificates
- Configuration and asset documentation
- Documenting and tracking inventory: levels, mix, WIP, finished goods

MULTI-VENDOR MANAGEMENT

- Management and collaboration for complete solution configuration
- Offload administrative tasks so your team can focus on critical tasks
- Coordination with multi-vendor solutions to manage complex global supply chains
- In-country, multi-site locations
- Configure/stage multi-vendor solutions across geographic regions

STAGING & INTEGRATION

- Rack and stack hardware assembly
- Network connections and hardware configuration
- Verification of all purchased hardware licenses
- System setups and software installations
- Simulation of your IT environment to accurately validate systems
- Bios administration
- Burn-in testing
- Automated builds

GLOBAL SHIPPING CAPABILITIES

- Offices worldwide
- In-country shipments
- Phased rollouts
- Multi-vendor coordination

"We provide services for our customers that range from the simplest image loads to complete configuration, integration, labeling, shipping, tracking and inventory control. Our consistency sets us apart. Once the customer's exact specifications are met, we deliver to those specifications every time."

John Perkins, Director of Traffic/Warehouse

Facility Use Cases

Reduce the demands on your already overloaded staff with support for:

Proof of value — simulate and test interoperability with multi-vendor solutions in our secure facility

Rack servers to organize your systems, as well as provide power, rack and cabling

Software imaging — install and burn-in on all appliances

Full configuration and integration of all compute, storage and networking components

Inventory stock and management, which ensures you have what you need when you need it

Product rollouts and phased implementations that deliver staged deployments of large multi-vendor systems globally

Asset labeling, tracking and barcoding to detail the assets you have and document their configuration

Asset decommissioning and recovery for your equipment at end of life, arranging for disposal and supplying certificates of destruction

Delivery logistics to multiple locations globally
