ConRes IT SOLUTIONS

Simplify your supply chain and reduce costs

Support and Service That Runs Full Circle

When your organization acquires new technology, your IT professionals are tasked with the logistics of building and launching your new environment. Every moment your staff is focused on procurement, deployment and configuration rather than core initiatives, it costs your organization time and money. Wouldn't it be nice to offload those responsibilities to a trusted advisor that has a fully staffed facility?

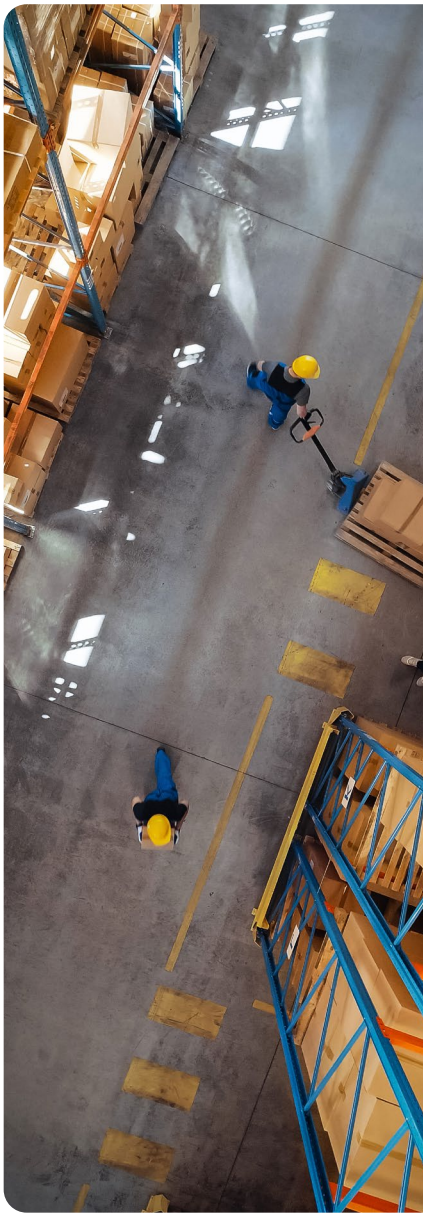
Our ISO 9001:2015 registered Integration & Logistics Center offers:

Inventory and asset management

- Equipment warehousing and staging in a secure, climate controlled facility
- Documenting and tracking inventory levels, work in progress (WIP) and finished goods
- Asset tagging, labeling and barcoding
- Issuing of birth and death certificates
- Asset decommissioning and data destruction

Staging and integration

- Install, configure and turn-up services
- Network integration and hardware configuration
- Software installation and configuration
- Infrastructure mapping and documentation
- System validation and burn-in testing
- Automated system builds and provisioning



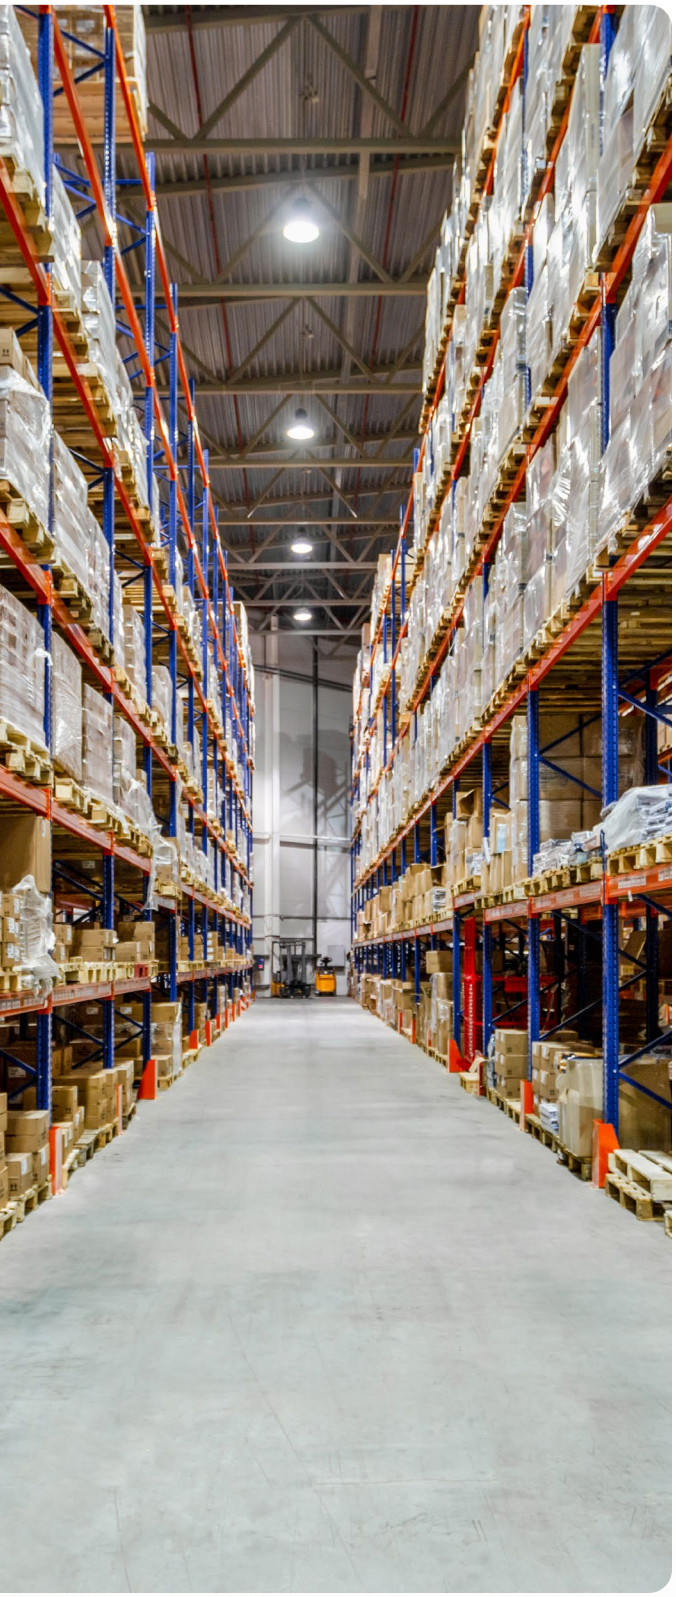
Actionable recommendations

- Project management
- Multi-vendor solutions to manage complex global supply chains

Global shipping

- Global presence and in-country shipments
- Phased rollouts

Facility use-cases



Enterprise desktop refresh

An insurance firm needed to upgrade more than 1,500 employee workstations while maintaining business continuity. ConRes managed the entire lifecycle — including asset tagging, imaging, kitting and delivery — through its Integration & Logistics Center. Each device arrived fully configured and user-ready for immediate use. This streamlined process minimized IT workload and eliminated downtime. The result was a seamless rollout of 1,500 desktops in under four weeks with 100% user readiness.

Accelerating warehouse network build-outs

A national grocery chain needed to meet aggressive timelines for activating network infrastructure in new warehouse locations. ConRes staged and configured spine/leaf network solutions weekly in its Integration & Logistics Center, ensuring each build was fully tested and documented for fast installation. This approach delivered ready-to-deploy infrastructure every week, enabled on-schedule warehouse activations and provided remote and onsite support for smooth installation and turnover.

Proof of Concept (PoC) acceleration

A financial services firm needed to evaluate multiple wireless solutions but lacked internal lab resources. ConRes built a dedicated wireless PoC environment in its Integration & Logistics Center, integrating hardware, software and network components for side-by-side testing and performance validation. This real-world setup accelerated the evaluation timeline by 50%, reduced internal resource strain and enabled confident, data-driven vendor selection.
